

530 FX

Compartments for banks

A HUB OF EXPERTISE

530 FX

Compartments for banks

For more than 100 years, Fichet-Bauche has been designing, manufacturing and installing vaults throughout the world. Always keeping pace with our clients' requirements, our areas of research have continued to develop, providing them with increasingly high levels of security. Now, all of Fichet-Bauche's experience in vaults has been combined and put to good use in the 530 FX compartment.

Did you know?

The 530 FX's ergonomic design has been optimised:

- Easier access to contents (the door's opening angle has been optimised)
- Careful identification (design and visibility).

Description

This compartment offers a very high level of resistance. Tests have demonstrated that its high-security design provides higher levels of resistance than those prescribed by the CLSIB (Comité de Liaison de Sécurité Interbancaire) and GETS (Groupe d'Etudes Techniques Sécurité).

The vault interior is an assembly of several compartment columns. What sets it aside from rival products is the uniform design of its components – the doors, the way in which the columns interconnect, the floor/wall fixtures and the defence panels.

If space is a consideration, Fichet-Bauche can incorporate the 530 FX into one of its safes: the Gold, Carat, Pyramis or GVX.

Secure access

2 mechanical solutions are available: 1 M3b lock and a mechanical warded lock (control) (lock version C) or 1 M3b lock, a 3-counter mechanical combination lock and a mechanical warded lock (control) (lock version CC).

The perfect solution for every site!

Single or double columns – only one condition needs to be complied with: the total height of a column must not exceed 2000 mm. It's up to you to decide how you want to assemble your compartments, using the various models available.

Useful dimensions for a single door (in millimetres)		
	Width	Depth
Useful inner dimensions	296	447
Outer dimensions	303	547
Free passage	240	–

The compartment columns are covered in an ash-coloured textured paint (RAL 7040). The doors' outer facades are equipped with a lock cover, finished with a dark grey Lexan plate.

Key storage

Keys for compartments not yet hired out can be stored in special openings on horizontal trays (105 Openings per tray). A 300 mm model compartment can accommodate 3 trays (i.e. 315 keys)
