by Fichet-Bauche

THE ONLY NAME FOR TRIPLE-CERTIFIED
STRENGTH AND RESISTANCE

Superior strength and
resistance has a new name:

INVIKTUS by Fichet-Bauché

Available in four protection grades and six sizes per grade, this premium range of safes delivers the very best in triple-certified protection against burglary, fire and explosives.

Certified protection: a must-have for demanding industries

High-risk companies in the banking and retail industries are increasingly looking for superior protection to ensure their valuables and important documents.

Safes that have been certified in accordance with European standards are today's best line of defence against burglary attempts or disaster. But to meet the stringent criteria required by the highest

certification standards, many safes simply focus on burglary and fire resistance, and adopt a "one-size-fits-all" approach that limits available options and compromises on user-friendly features.

Common challenges in today's security market include:

Limited certification: Many safes on the market today offer certified protection against burglary and fire. But very few offer "triple-certified" protection, which also includes explosives. As a result, many high-risk companies miss out on comprehensive protection, severely compromising the security of their valuables.

Lack of options: According to insurance companies, a safe's contents are only insured for the correct value if the safe carries the appropriate protection grade relevant to its size. In fact, the insurable

value increases with each step up in grade. To meet companies' every security need, a range of sizes and protection grades—each with the same high certification standards—is necessary.

Design challenges: Today's safes are often tall and deep, and come with too few or poorly positioned handles. The user must then bend and reach to access contents, increasing the probability of physical discomfort and strains.

The ultimate in strength and resistance

Triple-certified protection against burglary, fire and explosives is considered by many industry experts as the “gold standard” in security. To meet the European Certification Board of Security (ECB•S)'s EN 1143-1 and French Centre National de Prévention et de Protection (CNPP)'s A2p burglary protection standards, a range of attack tools typically used in burglary attempts—from basic equipment (i.e. hammers and simple drills) to sophisticated thermal and electrical equipment (i.e. oxyacetylene torches and disc cutters)—is used to test resistance.

To achieve the SP Technical Research Institute of Sweden's certificate for fire resistance (up to one hour), safes are placed in a furnace at temperatures of 1,000°C to ensure documents do not sustain any damage. And to resist explosives to the ECB•S EN 1143-1 standard, safes are subject to aggressive hazard tests that involve dynamite and explosives.

“Triple-certified” protection means resistance to burglary, fire and explosives.

The InviKtus range **meets all of these rigorous tests**, thereby offering one of the highest levels of protection for important documents and valuables on the market today. Highly adaptable to every security need, this premium range of safes is available in four protection grades and six sizes per grade, all of which meet the same high certification standards. What's more, the new design facilitates easy access through a shallower model that includes two additional handles, while the elegant dark blue colour with silver handles adds a stylish touch.

Triple-certified protection

The ECB•S and the CNPP are independent accreditation bodies that issue certificates for products in the security industry. The InviKtus range has been certified EN 1143-1 by ECB•S and awarded the A2p label by CNPP in burglary and explosion resistance, and NT Fire 017 – 60 Paper by SP in fire. A rarity in the security industry, this triple certification ensures top-of-the-line protection. A wide range of A2p/EN 1300-certified mechanical and electronic lock combinations are available.

Four protection grades, six sizes per grade

Ranges of safes that can offer the same level of triple-certified protection for as many sizes and grades are very rare. Four protection grades (III to VI) and six sizes per grade from 140- to 1120-litre capacity meet every security need. As the protection grade increases, so does the insurable value of items, ensuring valuables are insured for their full value by insurance companies.

Practicality meets style

The InviKtus range's triple-certified protection combined with its comprehensive size and grade options does not compromise on practicality or style. Featuring a stylish dark blue colour with silver handles, the new design is shallower and 10-25% lighter than the standard similar safes on the market. Users benefit from two new handles (one opening, one pull), enabling efficient and easy access to valuables. All models include four lateral steel bolts, one bottom bolt and a fully anchoring lateral bar.

Fichet-Bauché guarantee included

The InviKtus range delivers on the Fichet-Bauché guarantee: all safes are designed and manufactured in accordance with the ISO 9001 standard for Quality Management Systems, ISO 18001 for Occupational Health and Safety Management Systems, and ISO 14000 for Environmental Management Systems. They also feature Fichet-Bauché's patented composite material CM, which guarantees strong resistance.

INVIKTUS: at a glance

Ideal for Banking and retail industries or all customers looking to protect high-risk valuables

Locking

A wide range of **A2p/EN 1300-certified lock combinations** available.

MxB (level B/E and C/E) high-security mechanical locks that virtually eliminate possibility of replication and feature a blocking system to prevent key removal before secure locking.

Moneo (Sensitive or Visual, level C/E) mechanical combination locks that permit several million different codes and a scramble-upon-opening feature that resets dials to zero after each use.

Optional **GSL 1000** electronic locks (level B/E) that share and exchange information to enable rapid security procedure modifications.

Models

Please note: the figures below refer to exterior/interior measurements (in mm).

Fittings: 2-5 shelves depending on model, 2-7 lockable compartments (200- or 400-mm tall) depending on model, Optional extendable lockable drawer, Optional safe deposit locker columns, Optional shelf for hanging lateral files.
